

TripActions Liquid Expands Integrations with Leading ERP Solutions to Help CFOs Unlock Payments and Expense Data for Complete Spend Visibility, Control

January 7, 2021

New integrations between TripActions Liquid™ and NetSuite, Sage Intacct, and Quickbooks Online give finance teams the visibility and control needed on the path to business and economic recovery

PALO ALTO, CA, January 7, 2021 – [TripActions](#), the leading corporate T&E management platform, today announced new integrations between its revolutionary payments and expense platform, [TripActions Liquid](#), and leading Enterprise Resource Planning (ERP) and accounting systems. The pre-built integrations for NetSuite, Sage Intacct, and Quickbooks Online are available now to help CFOs and their teams unlock their organization's often siloed payments and expense data in real time. There will also be additional support available for additional ERP and accounting systems including Microsoft Dynamics, SAP, Xero and more.

"In an era where many CFOs are focused on their organization's path to business and economic recovery, having complete visibility and control over travel and spend management has never been more critical," noted Thomas Tuchscherer, CFO at TripActions. "That visibility and control over spend positions finance teams to accurately plan, budget and forecast, while also helping to quickly and accurately close the books at month-, quarter- and year-end."

"This integration automates and integrates T&E and ERP data to help finance teams experience an entirely new level of visibility over financial data," said Michael Sindicich, General Manager of TripActions Liquid. "An automated link with ERP systems will improve analytical capabilities and provide executives with true spending intelligence across the greater organization."

TripActions Liquid easily integrates with a broad suite of ERP and accounting systems to ensure all business spend data within the cloud-based corporate T&E platform seamlessly flows into an organization's financial system of choice. This includes business payments, expenses and the appropriate accounting and general ledger codes. The integrations build on TripActions' industry-disrupting approach to business spend management, eliminating the need for traditional expense management, the expense report and time wasted by finance and accounting teams on manual reconciliation. With a single swipe of the TripActions Liquid card, the entire expense management process is automated from categorization to compliance.

Integrations between TripActions Liquid and ERP and accounting systems seamlessly deliver:

- **Quick and simple implementation:** TripActions Liquid's pre-built integrations empower finance teams to get up and running quickly, safely and efficiently with their preferred ERP or accounting system
- **Increased accuracy and time savings:** Finance teams can automatically assign expenses and ledger codes in TripActions Liquid to map directly to their ERP or accounting system — saving time and preventing errors
- **Enhanced data visibility:** All TripActions Liquid transactions seamlessly flow into the ERP and accounting system for a centralized view of financial data in one system, empowering finance teams to make smarter, informed business decisions as expenses are actually incurred rather than when they are submitted, reviewed and approved as a traditional expense report

TripActions Liquid is the modern, smart spend-management solution that provides employees with a refreshingly easy way to pay for what they need while giving companies one place to better control, manage and track business spend. With physical and virtual cards, smart approval workflows, automated expensing and centralized billing, TripActions Liquid streamlines the entire process for business spend. TripActions Liquid delivers a better way for companies to cover online, on-the-go and spot purchasing; recurring subscriptions; and the rare out-of-pocket spend for everything a business and its employees need to spend money on—like travel, association dues, training courses, advertising and more. TripActions Liquid helps companies empower a distributed workforce to spend company money in a way that is simple and efficient while also maintaining visibility and close control.

TripActions is the only end-to-end T&E management platform for businesses large and small to easily and efficiently manage the entire T&E and business spend ecosystem. TripActions delivers a comprehensive, unified solution for travel, payments, expense management, corporate cards and reconciliation—all from a single, trusted partner.

Join the world's most innovative companies, from SMBs to Fortune 500 enterprises, already leading the charge to a world with "No Expenses" using TripActions Liquid, including Zoom, Lyft, Databricks, SoundCloud, Toast, Spin, Foursquare, Jetgo, Gusto, Celonis, Amplitude and many others. Switch to modern T&E management with TripActions so your employees can focus on their best work, not paperwork.
